Positive & Negative Pressure Isolation Units

Applications:

Laboratories	ORs	AFB (TB) Isolation
Oncology	Burn Wards	Neo-Natal
HIV/AIDS	Pharmacies	Triage
SARS Isolation	Radiology	

Negative Pressure Isolation Room

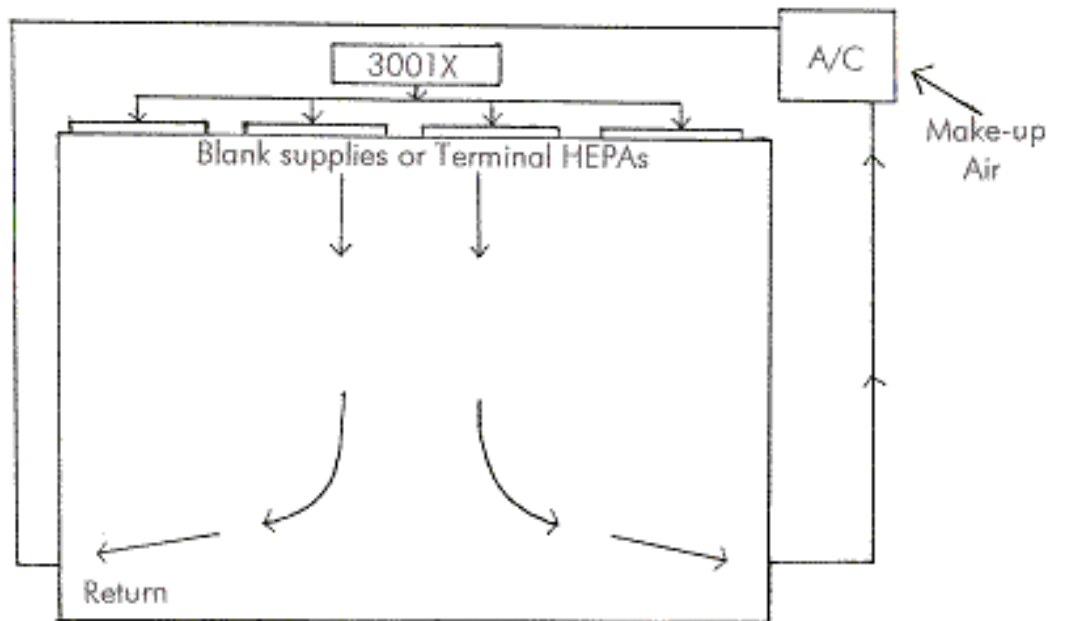

Bathroom exhaust tied into the exhaust ducting.

Risk reduction that pays for itself:

- Meet or exceed CDC guidelines for AFB Isolation Rooms and save 40%-60% of the initial straight ventilation renovation. This system has met the exacting standards of A.H.C.A.
- Provide your employees and clients with four times the contaminant removal of straight ventilation at similar ACH.
- Invest in a system that will pay for itself in energy savings within one to one and one half years.
- Cut maintenance costs (by up to \$2500 per room – [see our Medical Systems Power Point presentation](#)) with a truly user-friendly system that requires only minimal filter change outs.

Positive Pressure Cleanrooms
